## Complimentary Webinar

December 3, 2020  
10:30 AM—12:00 PM

Must register in advance for this meeting.  
To register, click link below:

[www.mrcpa.org/events](http://www.mrcpa.org/events)

One week before the event, you will receive instructions to join

This webinar is targeted at people beginning their Lean Six Sigma journey and those who simply want to refresh their Minitab analysis skills. During this session you will experience a “hands-on” application of the foundational statistics driving the Lean Six Sigma programs. It is also a refresher for Lean Six Sigma practitioners.

We will use Minitab statistical software to review key statistical process measures and also create graphs to provide a visual picture of the data. If you are new to Minitab and Six Sigma you will see the world's leading Six Sigma statistical software applied to a number of “real world” project datasets.

We will use Minitab statistical software to review key statistical process measures and also create graphs to provide a visual picture of the data. If you are new to Minitab and Six Sigma you will see the world's leading Six Sigma statistical software applied to a number of “real world” project datasets.

**Target Audience:** Anyone interested in streamlining processes, improving business performance and supercharging your career. This session is suitable for Quality System Managers, Supervisors, Operations Managers, Finance and Commercial Managers, and professionals who want to apply the methodologies and quality control process within an organization.

**Cost:** No cost, complimentary – *This event is made possible thanks to funding assistance through the MEP National Emergency Assistance Program.*
