

Who Should Attend

This course is for: senior level decision makers, general managers, supervisors, group leaders, quality managers, and any discipline that wants to apply the Six Sigma methodology to eliminate waste, reduce inventory, improve processes, increase throughput and improve bottom-line financial results.

Meet Our Trainer

Richard Titus

Richard is a Master Black Belt who spent nearly 20 years at Ingersoll-Rand in a variety of positions ranging from information systems, materials management, manufacturing engineering, design engineering, and more. Mr. Titus was certified as a Black Belt and Master Black Belt by Six Sigma Qualtec. He completed executive training with the Mahler Institute, Demand Flow Technology training at the John Costanza Institute of Technology and completed Lean Training with Six Sigma Qualtec and is a certified trainer for DDI. Mr. Titus earned a B.S. and M.S. in Engineering from Lehigh University and has been a lecturer with the Lehigh College of Business and Economics since 2000. He is currently an adjunct instructor at Lehigh University and is a PHD candidate at Penn State University. He has supported over 200 six sigma projects resulting in over \$30 million dollars of real savings!

Funding subsidies may apply. Please contact Diane Lewis at (610) 628-4578 or email her at: diane.lewis@mrcpa.org to see if you qualify.

Six Sigma Green & Black Belt 2019 Certification

The MRC Difference

Bridges the gap to practical implementation

This is not your ordinary training course. Most Six Sigma courses seek to educate. Only MRC trains and assists you in the actual implementation of your project.

Case studies don't cut it here

Your Six Sigma project is chosen by you to drive change on a real organizational issue. Successful completion means you are improving product quality, enhancing customer service and saving your company money.

Project Mentoring is expected, not optional

The instructor goes above and beyond to ensure you are successful. Course price includes (4) individualized onsite project mentoring meetings. Mentoring by a Master Black Belt helps ensure a solid ROI on your first project.

Cost: \$4,500

Full MINITAB license is required and is not included in course fee. The cost to purchase from instructor is \$1,595.00

Includes (4) individualized onsite project mentoring meetings

2019 Schedule

- Week 1: January 16, 17 & 18
- Week 2: February 11, 12 & 13
- Week 3: March 12 & 13
- Week 4: April 9 & 10

8:30 am - 4:30 pm

Some training dates may be held at participant's sites to enhance learning experience. Dates and location subject to change.

Program Overview and Objectives

Six Sigma Green Belt is designed for individuals with little or no prior experience with Six Sigma methodologies. This course is considered a "Dark Green" belt as it emphasizes statistical tools to improve performance and have the goals "stick." Objectives include:

- Demonstrate the DMAIC methodology
- Document to show progress and results
- Select and apply tools
- Collect and analyze data

Program Description

This Six Sigma Green Belt course consists of 10 classroom days and 4 individualized onsite mentoring sessions. It will provide a comprehensive overview of Six Sigma concepts, history, roles, implementation, and Green Belt statistical tools. A core part of Six Sigma Green Belt Training is :

- | | |
|--|---|
| ■ Process Flow Charting | ■ Analysis of Variance |
| ■ Factorial Design | ■ Multiple Regression |
| ■ Control Charts | ■ Goodness of Fit Testing |
| ■ Process Capability | ■ Design of Experiments |
| ■ Measurement Systems Analysis (Gauge R&R) | ■ Distributions and Statistical Processes |
| ■ Failure Mode Effects and Criticality Analysis (FMEA) | ■ Variability Reduction using Design of Experiments |
| ■ Inferential Statistics | ■ Cost Analysis and Justification |
| ■ Correlation and Regression | |

Benefits

After completing this course, participants will be able to create charts, process maps, and control plans to describe Six Sigma roles within an organization, use statistical tests to improve processes, use Minitab to run statistical tests, and define a Six Sigma project. Typically Green Belt projects save at least \$25k to \$50k in cost savings in process improvement.

Program Overview and Objectives

Six Sigma Black Belt includes the first 10 days of Green Belt, plus 7 days of Black Belt material. We developed this format so that individuals within the same company could attend the training together. This improves the synergy within the organization. In addition to what is taught during the Green Belt days the last 7 days of Black Belt training will focus on:

- Advanced Regression and ANOVA
- Advanced Capability
- Design of Experiments
- Non-Parametric Distribution(s)
- Logistic Regression

Program Description

- | | |
|--|---|
| ■ Process Flow Charting | ■ Analysis of Variance |
| ■ Factorial Design | ■ Multiple Regression |
| ■ Control Charts | ■ Goodness of Fit Testing |
| ■ Process Capability | ■ Design of Experiments |
| ■ Measurement Systems Analysis (Gauge R&R) | ■ Distributions and Statistical Processes |
| ■ Failure Mode Effects and Criticality Analysis (FMEA) | ■ Variability Reduction using Design of Experiments |
| ■ Inferential Statistics | ■ Cost Analysis and Justification |
| ■ Correlation and Regression | |

Benefits

After successfully completing the Six Sigma Black Belt course participants will be able to explain multiple regression, perform factorial experiments, determine size calculations needed for experiments, and describe the different types of process optimization. Typically Black Belt projects save \$50k to \$100k in cost savings in process improvement.

Cost: \$7,995

Full MINITAB license is required and is not included in course fee. The cost to purchase from instructor is \$1,595.00

Includes (4) individualized onsite project mentoring meetings.
