

Introduction to Preventive & Predictive Maintenance

March 12-14, 2019
8:30 am - 4:30 pm

Host Site Location - To be announced

This three-day course will be hosted at a local manufacturing company and will provide the hands-on skills and strategies to make the switch from firefighting to true Maintenance Excellence.

Participants will receive real-life, hands-on experience while learning the fundamentals of Preventive and Predictive Maintenance.

Reliable equipment is only achievable with a proactive approach. Preventive (PM) and Predictive (PdM) maintenance are the tactical activities companies must embrace in order to achieve this. This course will teach you how to create world class preventive maintenance inspections, illustrate predictive technologies (and how you can start using them immediately) and create an effective PM & PdM program, optimize existing PMs, and show how to measure their effectiveness.

Cost: \$990/person | Register at: <http://www.mrcpa.org/events>

Presenter:

Larry Bouvier, CMRP | Project Manager
Fuss & O'Neil Manufacturing Solutions

Larry has decades of experience in heavy industrial maintenance as a maintenance technician, plant engineer, maintenance and plant engineering manager and project manager in the steelmaking, foundry, machining, plating, and flexographic printing industries.
