

Root Cause Analysis for Maintenance

May 3-4, 2022 | 8:30 am – 4:30 pm

Are you fixing the root cause of your equipment failures or just correcting symptoms only to have the same problem come back again and again? Executing permanent corrective actions on equipment failures is the pathway from reactive to proactive maintenance and true reliability excellence.

This workshop will be hosted at a manufacturing site if possible and will provide hands-on skills and strategies while teaching the fundamental tools of Root Cause Analysis.

Root cause analysis is a suite of many useful tools, but it takes more than learning what the tools are to make you successful. Our workshop will facilitate actual root cause analyses with host's processes and equipment, using the most appropriate tools.

Cost: \$750/person or \$690/person if 3 or more (includes light breakfast, lunch & materials)

This course is eligible for WEDnet reimbursement.

To protect proprietary information, the host company has the right to approve registrations.

About the Instructor:
Larry Bouvier, CMRP
Vice President

Fuss & O'Neil Manufacturing

Larry has decades of experience in heavy industrial maintenance as a maintenance technician, plant engineer, maintenance and plant engineering manager and project manager in the steelmaking, foundry, machining, plating, and flexographic printing industries. His focus on personal development, coaching and training of his employees, peers and clients has been instrumental in helping the companies he has worked for, and his clients achieve World Class Maintenance by leading and developing maintenance organizations, establishing maintenance best practices, and improving processes and equipment reliability. He possesses excellent leadership, organizational and hands-on skills and has done maintenance organization building, shop floor and classroom training in TPM, RCM, Maintenance Excellence, Maintenance Skills and Productivity improvements.
